

Handheld GPS-Navigator Pro

This handheld Global Positioning System is a perfect tool for open air adventure and competitions, with individual participants or teams.

Truly a small wonder this GPS-navigator takes the best features of a 12 channel GPS receiver for accurate positioning. Many positions to reach ("waypoints") and even routes to follow can be programmed!

Ready to go !

The GPS-Navigator Pro has a weight of only 150 grams and fits perfectly in the hand. All control buttons are located on either side of the unit, allowing for simple, one-handed operation that won't obstruct your view of the display.

Operation is extremely easy. This makes this GPS-navigator Pro the ultimate in user friendly design. It is also waterproof, so it can take an accidental splash or drunk in the water and still continue to perform. And for operation at night the display can be back-lit!

AniMotion supplies the GPS-Navigator Pro per piece or per set of 4, with or without operator.

Some ideas for events :

- "Treasure Hunt" : a "treasure" is hidden somewhere in nature or in the city. Several teams have to go and find it, using their GPS-navigator.

- one or more teams/individuals have to follow a route existing of a series of locations that are found using the GPS-navigator. At every location there's a task to be completed (or a question to be answered).
