

# ALPINE RACER DLX

## Ski-simulator

The Alpine Racer offers a virtual and entertaining ski-sensation. It requires from the player a combination of both skill and speed. The only difference with real skiing is that there's no snow and no mountains. But the fun is just the same !

### Safe skiing

Players can select from different skiing styles with a choice of circuits and various grades of difficulty (novice, advanced & expert). They can then compete with computer-generated opponents. The computer also keeps track of the results achieved by various players. This makes it possible to set up your own pre- or après ski-competition, without taking the risk of breaking a leg !

The 127 cm (diagonal) big retro-projection screen shows high quality 3D-graphics.

These graphics also show your speed, time, position and other game-information. The computer also keeps track of the records for each slope.

### Technical details

#### **Dimensions :**

130 cms x 250 cm  
230 cm high  
(190 cm, without "topbox")

#### **Weight :**

approx. 285 kgs.

#### **Power :**

1 x 10 Amps, 220 Volts

#### **Installation time :**

20 mins.

#### **Capacity :**

20-25 players/hour
