

RACE-SEAT

Enjoy the real feeling of racing !

The Race-Seat is our answer to the increasing demand for clients who want large numbers of simulators for their events.

The pilot is comfortably seated in a real rally-seat. These seats are available in several colours : black, red, blue,...

The game is played by use of a force-feedback steering wheel and pedals. Their positions can easily be adjusted to the size of the player.

The game-controller is installed under the pedals and up to 6 Race-Seats can be linked.
