

# LASERSQUASH

**A new hi-tech game that combines the intensity of sports with cyber-fun. While laserbeams are being shot at you, sound- and visual effects will astonish you and take you to a world controlled by the laws of speed only.**

This new spectacular game opposes the players against laser-beams being shot towards them in a random direction. To score points these beams must be hit with the Laser-stick. Very simple but great fun! Each time a player hits the laser-beam the stick brightly lights up and vibrates in his hand. You score more points when you hit the laser-beam faster.

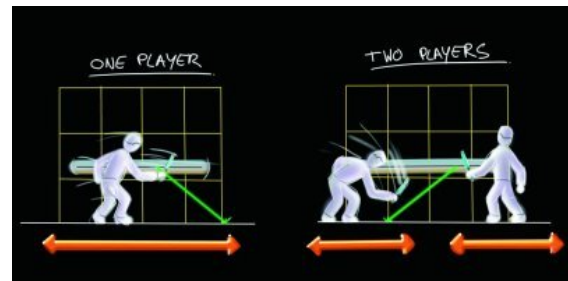

If the player is too late the beam disappears and the player gets no points. The results are displayed on a screen and the game is supported continuously by voices, sounds and visual effects. Addictive to play and great to watch.

***LaserSquash is a perfect combination of high-tech and an easy to understand sports-game that tests and improves your condition and reaction-speed.***

LaserSquash can be played by 1 or 2 players. It is controlled by a touchscreen where you can select the number of players, the game-mode and the level of difficulty. During the game your reaction-speed is measured and the game adapts itself to the level of the player.

So if a player becomes better, the game will go faster and the amounts of points that can be won become higher. Finally the game arrives at a level where the player will need to play at his very best. And the light- and sound-effects push the adrenaline to extreme heights. LaserSquash is a fantastic way to play all stress away in a few minutes.

## **Technical data :**

**Safety :** The system is completely safe and complies with the European regulations on product-safety as described in 89/336/EEC, 73/23/EEC and EN 60825-1.

**Space :** 5 x 6 m (dark if possible)

**Power consumption :** 2 x 16 amps, 220-240 volts

**Installation time :** 1 hour

**Capacity :** 40-50 players/hour
