## **REVOLUTIONARY RELAXATION SYSTEM DEVELOPED BY ANIMATION**

Dreamseats are specially developed seats based on mind-machine technology but adding 2 extra dimensions :

- We don't use traditional mind-machine glasses but Virtual Reality glasses. These transmit not only the light-pulses of the mindmachine, but at the same time they show real images. E.g. for a relaxation program you could be flying through the stars.

- The pulses (with frequencies coming from the mindmachine-controller) are also transmitted by a unique vibrating cushion in the back of the seat. This adds an extra dimension and strengthens the effect of the audio-visual effect.

### **Technical details :**
