

LaserPowerBiathlon Biathlon shooting simulator

The model LaserPower is intended to train even the youngest on the art of target shooting. Independent expertises show that target shooting considerably increases the children 's capacity to concentrate so that the model LaserPower does not only give the youngsters the possibility to become familiar with target sports technology but it also promotes the general development. As laser rifles are not firearms in the sense of any firearm law it is possible in countries with restrictive regulations in this respect to allow even children from the age of 6 years to participate in the club life and to teach them the fascination of target shooting.

In addition to the training of youngsters this laser rifle can also be used as a training device for summer biathlon or for PR events to attract people who are interested in target shooting. Even outside the shooting club the device can be easily set up so that people have the chance to get a first idea of target shooting or to imitate their biathlon idols. The champions of the future are the beginners of today.

Installation time : 15-20 mins.
Capacity : +/- 50 players/hour per system
