

3D-GOLFPRO GOLFSIMULATOR

Our 3D-GolfPro golfsimulator offers one of the best golf simulations ever. It combines infrared motion-capturing with accurate swing and shot analysis and software that allows you to play on some of the worlds most famous golf courses.

Sixteen advanced infrared optical sensors accurately measure your club through the impact zone capturing shot impact conditions. Distance and direction of a golf shot are determined at the point of impact. True simulation uses highly scientific methods to capture that impact data, and relays the results in real-time to the player in a visual display that replicates each shot.

Since the movement of the club is measured (and not that from the ball) 3D-Golfpro can be played with real balls, foam balls or no ball at all. Animation often uses a system where a real ball is fixed on a pivoting system. This gives the feeling of real playing but is also very practical and safer.

3D-Golfpro can be used with its' own software but can also be played with Tiger Woods08/09 PGA Golftour.

Up to 4 players can play together.

We offer 3D-Golfpro in 2 configurations :
- with a 300 x 225 cm projection screen and a truss structure
- with a 42/50 inch LCD-flatscreen

Technical details :

Space required :

6,5 x 3,5 m with video-projection, screen
300 x 225 cm, projector 3500 lumen

4 x 3,5 meter with 42/50 inch flatscreen

Power supply : 220-240 volts, 10 amps

Installation time : 45 mins with
flatscreen, 90 minutes with projection

Capacity : max 15 players per hour

Use : indoor only, not to much ambient
light
