

ATV TRACK

Quads on Amazon

ATV TRACK is a motion-simulator challenging the player's ability to ride a quad through spectacular courses on the Amazon.

Motion base

The ATV Track interface has been developed as if it were a real quad. The engines installed in the machine are capable of moving more than 200 kg. being able to carry two people at the same time, plus the motion base simulates with accuracy the quad's movements.

Game

The aim of this game is to cross the Amazon within a time limit, driving a high performance sport Quad. It is played by using a handlebar with throttle and two brake levers.

However, in this adventure, speeding is not the only way to become No. 1.

There are two playing modes: competition and practice.

Players can select from 4 circuits, 2 characters and 4 models of quads.

The game is played by one player, but the "friendly" seat offers space for a passenger.

Technical details

Dimensions (assembled) :

height : 212 cm
width : 97 cm
depth : 255 cm

Weight :

540 kg

Screen :

87 cm monitor

Power consumption :

10 Amps, 220 Volts

Installation time :

15 to 30 minutes

Players :

1 + 1 passenger
20-40 persons/hour
